

WordPress tricks: Creating a menu on a page using images from a category

My goal was to use WordPress to create a page of images from a category so that I could continue to add more posts to the category and have the page update itself automatically. In other words, I hoped to imitate this HTML page <http://www.deeptruths.com/posters/posters.html> using a WordPress plugin to avoid all manual HTML coding hassle.

I did it using two plugins: [Widgets on Pages](#) and [Ultimate Posts Widget](#)

I had to edit the Ultimate Posts Widget php file to add code just after the img tag to float the images to the left and add some space around them.

```
style="float:left;margin:1em;"
```

See [the result!](#)
