

[A Christian Professor Disproves The Theory of Evolution](#)

Dr. Major Coleman

Professor Dr. Major Coleman makes some excellent arguments that disprove evolution. He shares every things in this video that I didn't know.

Transcript

Interviewer: Let me ask you this question, which is why are you so interested in this biblical story as opposed to any other biblical story?

Professor: Well, there that is because first of all Jesus believed in the flood model, and it's the basis for the entire authenticity of the Bible. If you can prove that the Genesis story is false, you have destroyed the entire belief system on which Christianity is based. So that's why we use this model to show people that Noah's Ark was real and that the story is true.

Interviewer: Well, couldn't the story have been a symbolic metaphor for other kinds of events that took place? How about Creation? Couldn't that have been symbolic or metaphorical in the language that's there?

Professor: Well it is possible, but when we look at the four postulates of Creation and we compare them with the four postulates of Evolution only the postulates of Creation have been observed.

Evolution is based on four major ideas. None of them have ever been observed. Number one is that life comes from non-life. We do not have one single example of life coming from non-life. Number two, that all the life forms that we have today came from single-cell life forms. Many people do not know that while we do have single-cell life forms that we call bacteria, we have no two-celled life forms, we don't have three-cell life forms, we don't have four-cell life forms, we don't even have five-cell life forms. That is, we go from single-cell bacteria to complex life forms. So there's no evidence that all life comes from single-cell life forms.

The third postulate of evolution is that time and chance drive evolution forward. Time works against evolution. The chance of one simple 100-unit protein coming together by accident is ... this is a very big number. Time and chance make evolution absolutely impossible.

The fourth postulate that evolution is based on is that, what we see today, minor genetic variation in species is evidence of macroevolution. So because cats are different colors, and dogs are different sizes, that means that fish turned into cows. And of course, we know that that's not true because Mendel proved that all the genes that exist today, you can shuffle them around, but there are no new genes that were created.

Let's think about the four major postulates of Creation. Number one where there's a design there must be a designer. We see codes in DNA. Codes are evidence of *intelligence* because you have to translate from one language to another. We have not a single example of that happening by accident. Number two, that the earth, the solar system, the universe, and the galaxy are *young*, measured in thousands of years not millions or billions of years. Many times people ask me, "Well Major, you believe in a young earth, a 6,000-year earth. Can you show me that that's true without using the Bible?" And I say, absolutely. What's the oldest living thing on the planet? Trees. How old are the oldest trees? 4,500 years. That takes us back almost exactly to the year of the flood, in 2,500 BC.

Number two, I'm saying look at the sky. We call solar nebulae a solar nebulae is what we see from a supernova when a star explodes It leaves a gas cloud because of our radio telescopes that we have now today we can look deep into space and we can actually count the number of solar nebulae that are there. And how many are there? A supernova takes place about once every 26 years. How many solar nebulae do we have? 6,000 years worth! That's impossible in a universe that is billions and billions of years old. And we have other evidences such as alpha decay that we do in our program that most people don't understand that also shows That the earth is 6,000 years old. So that's the second postulate proves that the biblical story of Creation is true.

Life that we see today are the basic kinds of animals and plant life that were originally created. So we can test that. You can breed dogs. You can breed cats, but you can't breed cats with dogs. So there are limits to how far we can go.

And lastly, that is, the earth experienced a worldwide flood in approximately 2,500 BC Sixteen hundred and fifty-six years after the world was created. The world is filled with limestone. Limestone is a sedimentary rock. It precipitates out of water. The entire earth was filled with water. Every mountain chain in the world including Everest has sea life on top of that mountain. The mountains rose out of the water. So we know that there was a worldwide flood.

Interviewer: Let me let me pose a question to you and Mark, and feel free to jump in. And that is this: Most people who don't believe in God aren't card-carrying members of the Atheist Club. They haven't studied molecular biology. Why don't they believe in God? What is the struggle there?

Professor: I'm gonna tell you that's a very good question. My answer to that is probably because most of them have not actually seen the evidence that supports the Bible. And that is my job to actually show them. You're right, most people are somewhere drifting somewhere in the middle. This is a war for

ideas, and it's my job to combat these forces of error particularly in secular campuses and in Universities, which is where I work and teach and show that the evidence supports God's Word. God is a God of science.

Interviewer: That's fantastic. Let me pose this question to you guys. Say someone grows up going to a Christian church. Say they have been surrounded by, you know, a church community and pastors who preach sermons. Are there wrong ideas of God that exist? Wrong ideas of the Bible that exist?

Professor: Well, certainly they do exist and they exist in the church. Many people don't know that some of the largest Religious denominations actually support evolutionary theory, and I'm really sorry to hear that. It is important that people test any church that they go to against the Bible to make sure that it is in accordance with the truth of the Bible. Jesus believed in the flood story, and He said that He was coming again and it would be just as in the days of Noah. So if Jesus believed it, it's very difficult for me to understand how you could call yourself a Christian if you don't understand or accept the story of Noah's Flood and the Creation story. And of course, it's important to understand the science that goes along with it.

Interviewer: You see that camera right there? There are people who are watching right now. There are people who are struggling with their faith in God. If you were to look at that camera right there and you were to talk to someone who was struggling, who is maybe a skeptic, someone wrestling with doubt. What would you say to them?

Professor: I Would say hold on. The evidence is there. God is interested in you. He respects who you are. if you read, if you study, if you seek Him with all your heart, you will find Him. He has promised you that. The evidence is there and I am here to help!
